

Forex Symbol «Great Britain Pound vs Russian Ruble» or «GBPRUB»

GBP/RUB is not a popular currency pair at Forex market. This trading instrument is poorly predicted because of the complex prediction of the Russian ruble as a result of its non-free convertibility and doubtfulness in a sufficient level of professionalism on the part of the state supervisory authorities in Russia.

To date, the Russian ruble pegged to the two currencies - the U.S. dollar and the Euro at a ratio of 55% on the 45%. The course of Russian Ruble is mainly determined by world prices for raw materials is that Russia exports. These are mainly oil and gas.
